

Delta Exchange: Dedicated Favorites Tab for Faster Market Access

Delta Exchange is a crypto derivatives trading platform. Traders actively monitor multiple assets across different market categories. The current Watchlist section lacks a dedicated Favorites view — forcing repeated tab switching to track preferred assets.

// DESIGN PRINCIPLE

”Reduce steps between intent and information.”

// CORE INSIGHT

Traders need instant access to their most-watched assets. Every unnecessary tap or navigation step adds cognitive load in time-sensitive decisions.

// THE CHALLENGE

Favorites were scattered across tabs, forcing repeated tab switching and interrupting the fast-paced decision-making workflow that traders depend on.

// OBSERVED PROBLEMS

- 1Starred assets not surfaced in a single dedicated view
- 2Repeated tab switching to track preferred markets
- 3Increased friction for high-frequency traders
- 4No at-a-glance favorites snapshot

// EXISTING STATE

The problem in context.

Delta Exchange before — starred assets scattered across multiple tabs with no dedicated Favorites view, forcing repeated tab switching.

// PROBLEM → SOLUTION

The proposed solution.

Add a dedicated Favorites tab beside All. Any starred asset automatically appears there — giving traders a persistent, zero-effort favorites view.

// WHY THIS WORKS

- Faster access to tracked markets
- Reduced friction in daily trading workflow
- Improved trader efficiency at open and close
- Better alignment with professional trader behavior

// BEFORE

Starred assets mixed across all tabs — no dedicated favorites view.

// AFTER

Dedicated Favorites tab shows all starred assets instantly in one place.

// EXPECTED IMPACT

- Faster access to tracked markets
- Reduced friction for daily active traders
- Improved session efficiency
- Higher engagement with watchlist feature

// REDESIGNED STATE

The solution in context.

Delta Exchange after — a dedicated Favorites tab sits alongside All, surfacing all starred assets in a single zero-friction view.

// KEY LEARNING

”Small structural changes to information architecture can have outsized impact on expert user workflows.”
