

Groww: Adding Gift Nifty for Better Pre-Market Sentiment

Groww is a widely used investing platform for retail traders and investors. Its F&O section already surfaces key market indicators such as Nifty 50 and Sensex through top cards. However, a critical pre-market indicator is missing.

// DESIGN PRINCIPLE

”Surface the most actionable information at the right moment.”

// CORE INSIGHT

Gift Nifty acts like an early market weather report. For active traders, seeing it instantly can shape opening strategies — and keeping them inside the app builds habit.

// THE CHALLENGE

Intraday traders rely heavily on pre-market sentiment before the opening bell. Gift Nifty is one of the earliest indicators they track — but it is absent from the top card section, forcing users to leave the app.

// OBSERVED PROBLEMS

- 1 No instant access to Gift Nifty sentiment inside Groww
- 2 Users must navigate to external sources for pre-market signals
- 3 Slower morning decision-making workflow
- 4 App feels incomplete for serious intraday traders

// PROBLEM → SOLUTION

The proposed solution.

Add Gift Nifty as the 5th top card alongside Nifty, Sensex, Bank Nifty, and India VIX in the top indicators section of the F&O screen.

// WHY THIS WORKS

- Faster pre-market insights without leaving the app
- No extra navigation required
- Better readiness for market open
- Aligns with real trader morning behavior

// BEFORE

Users check top cards, then leave app for Gift Nifty updates.

// AFTER

Users get complete pre-market sentiment snapshot directly inside Groww.

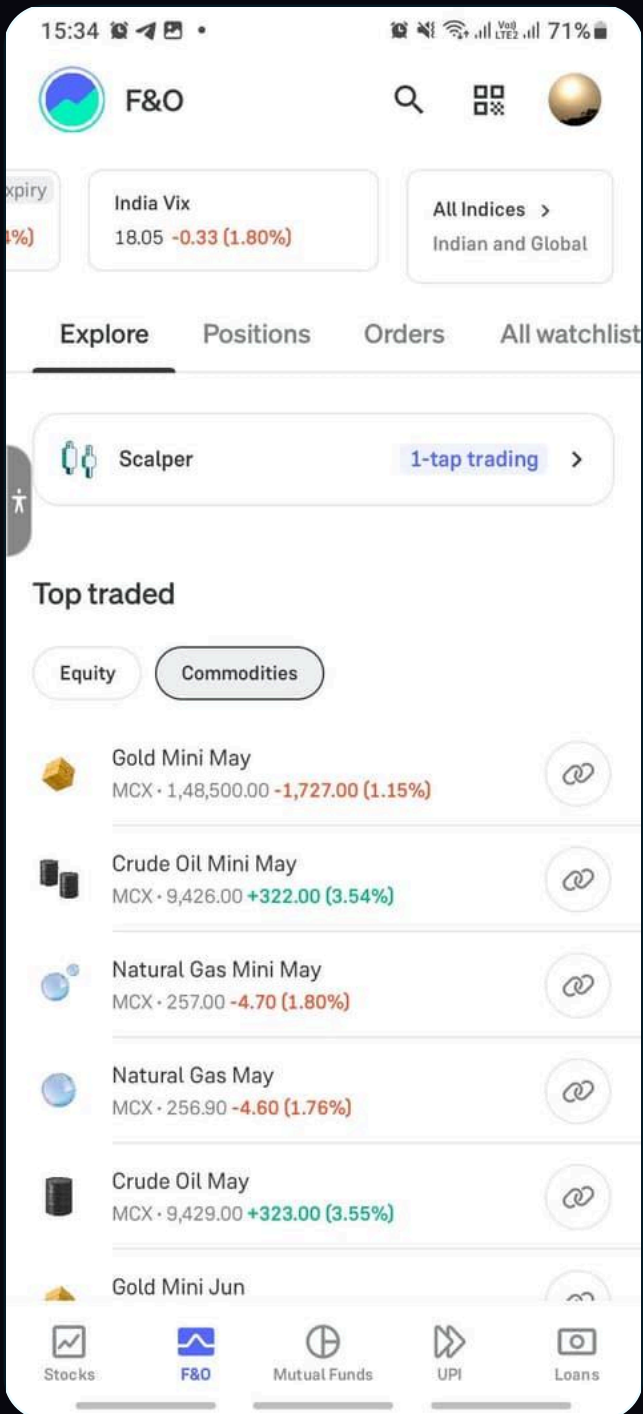

// EXPECTED IMPACT

- 26% increase in F&O morning engagement
- Faster first trade decision-making
- Higher repeat usage among intraday traders
- Improved perception of Groww as trader-friendly

// PROBLEM & SOLUTION IN CONTEXT

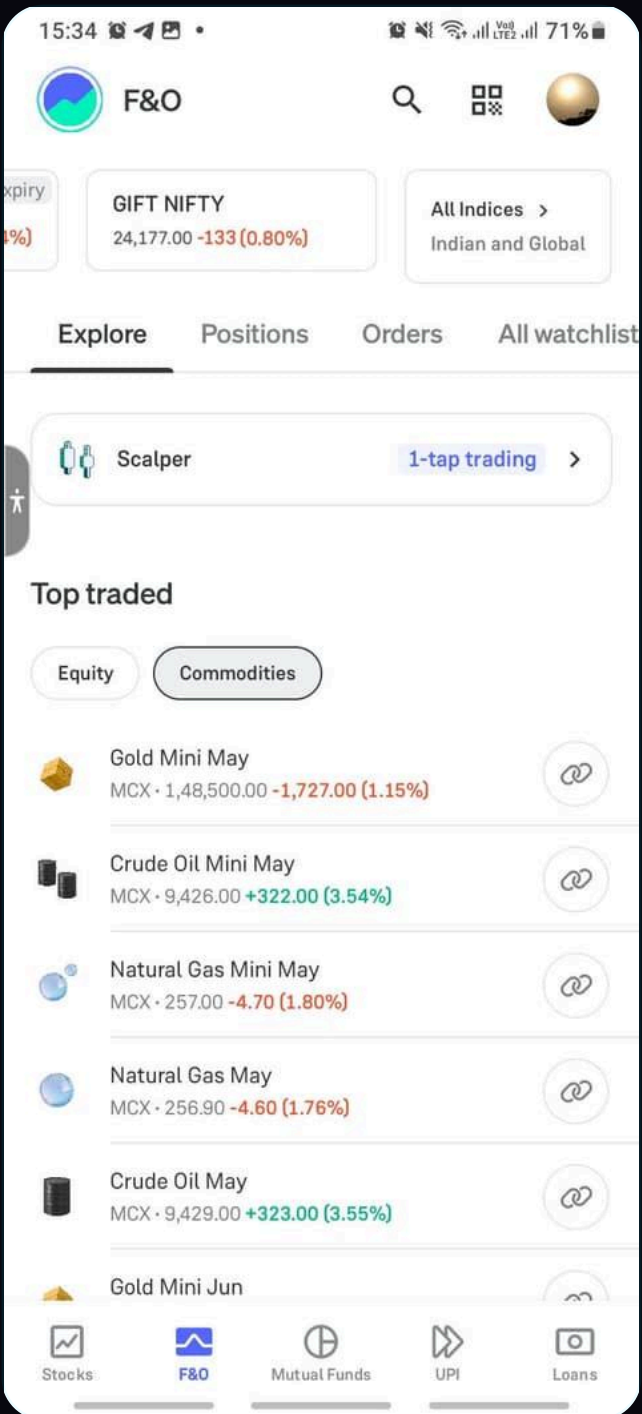

Side-by-side comparison.

// PROBLEM

Groww F&O existing state — top indicators section shows Nifty 50 and Sensex, but Gift Nifty is absent, forcing users to leave the app for pre-market data.

// SOLUTION

Proposed solution — Gift Nifty added as the 5th top card alongside Nifty, Sensex, Bank Nifty, and India VIX for a complete pre-market snapshot.

// KEY LEARNING

”High-value UX often comes from adding the right information in the right place — not adding more features.”
